*Microsoft Dynamics GP
Advanced Management*

Realize your business vision with confidence

Microsoft Dynamics™

“Our assets have grown to nearly \$1.8 billion. Yet headcount in the accounting department has remained the same. Microsoft Dynamics GP allows us to grow without adding new positions.”

*– Elizabeth Chege
Controller
Addison Avenue Federal Credit Union*

People drive business success

Regardless your industry or the size of your organization, it's your people who drive results. Business success depends on providing everyone in your organization—from the CEO to management and teams to individuals—with ready access to the information, systems, and tools they need to work at peak performance.

But you know that. And we know it, because we've worked directly with our customers to design Microsoft Dynamics™ GP Advanced Management, a solution that bridges the gap between business process automation and the way people really work.

Microsoft Dynamics GP Advanced Management equips people at all levels of your organization to keep pace with the competition and manage changing markets, unique requirements, and the full range of business operations.

Built to work like and with the Microsoft® Office system and Microsoft technologies, this familiar, flexible solution helps ensure your people work effectively from the start and helps you maximize your investment in a unified Microsoft platform and industry-leading customization tools.

Proven capabilities automate and connect financial management, supply chain management, customer relationship management, human resource management, manufacturing, and project management. You'll have the power to meet demanding, industry-specific requirements, collaborate and communicate via Web portals, and deliver reporting and business intelligence tools that reach all your people—whether they're working in Microsoft Dynamics GP or other applications.

Just as important, your solution can grow with you into the future. You can add users and enhance your solution with capabilities designed to meet the most complex business needs. At all times you'll be backed by a community of local certified partners, all dedicated to helping you take advantage of a solution that frees your people to focus on business performance rather than the systems that make your business run.

Move forward with confidence.

“While the processes were new, the skills were not. Everyone in the department knew how to use Outlook and Excel so training on Microsoft Dynamics GP was minimal and completed quickly.”

– Elizabeth Chege
Controller
Addison Avenue Federal Credit Union

A solution that's familiar to your people

Do you want a business application that your people already know how to use? Our user interface has the look and feel of the Microsoft Office system, so whether employees are working in Microsoft Dynamics GP or Microsoft Office, they'll feel at home. A role-tailored design and intuitive task panes help them keep the focus on their key responsibilities, rather than on chasing information and juggling applications. Equally important, Microsoft Dynamics GP integrates smoothly with other Microsoft Office system applications, empowering your people to make the most of the applications they use everyday.

Give people fast access to relevant information and tools with the Role Center, a home page tailored to real jobs within your company. You can work out of the box with more than 20 role centers that span Sales Manager to Accounts Payable Clerk to IT Developer, and then further personalize the home page to meet individual needs.

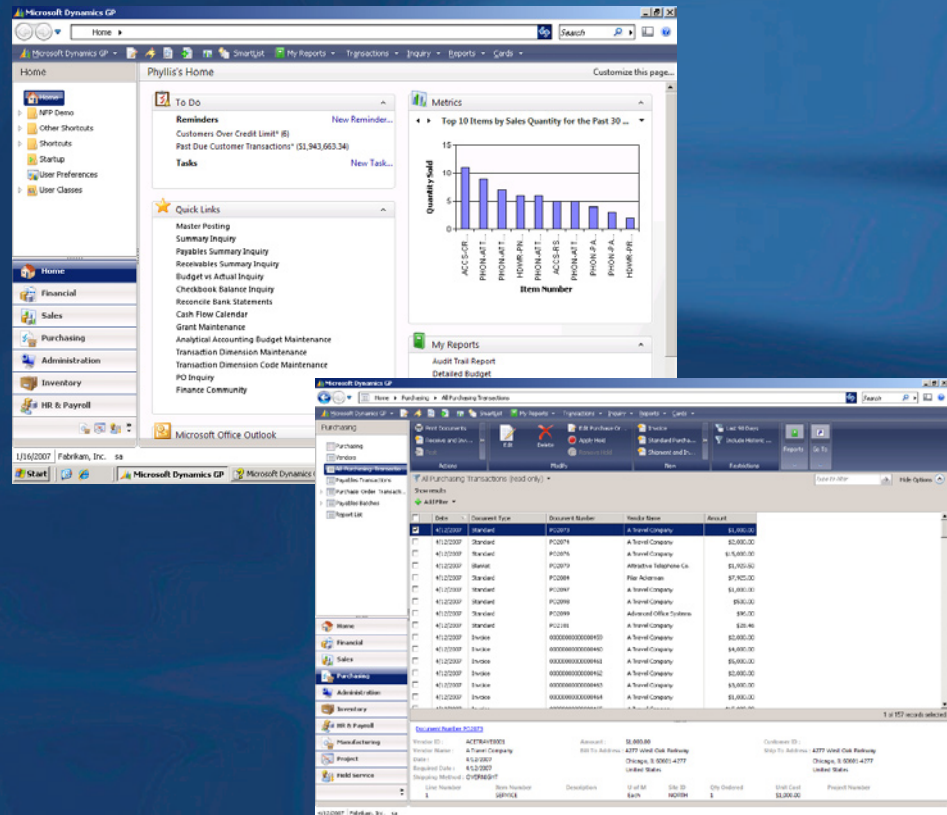

Connect personal productivity with real-world business processes. Along with offering a familiar user experience, Microsoft Dynamics GP helps people perform role-specific tasks quickly and intuitively with Action Panes, intuitive command bars inspired by Ribbons in the 2007 Office system. Action Panes appear across all navigation lists, making it easy for people to sort and filter records and perform multiple tasks from within a single window.

Help eliminate the need to juggle applications and save valuable time with smart tags that enable quick access to Microsoft Dynamics GP data from Microsoft Office applications, including access to customer, vendor, inventory, general ledger account, and employee information.

Smooth integration with the Microsoft Office system makes it easy for people to analyze information in Office Excel®, populate Office Word form letters and other documents with up-to-date customer and vendor information, and send customer statements and invoices via Office Outlook®.

The Role Center delivers a personalized home page that enables people to work with the information and tasks most relevant to their jobs.

Empower people to work faster and smarter with the Action Pane, an intuitive, graphical command bar that appears across navigation lists.

SIMPLIFY

"In the long run, using the same products and technologies makes it easier for AirTran IT specialists, and makes the entire company run more cost effectively since we've become a Microsoft one-stop shop."

– Kim Meredith
IT Program Manager
AirTran Airway

Fits with your existing Microsoft systems

You want your people to concentrate on your business, not on your IT systems—that's why we designed Microsoft Dynamics GP to offer deep integration with Microsoft products and technologies—including Office Excel, Microsoft Office SharePoint® Server 2007, and Microsoft SQL Server™. System flexibility, integrated security features, and customization tools give you the ability to adapt the system to meet changing business needs with minimal cost. Your IT staff will be instantly familiar with business software built on your existing Microsoft infrastructure, enabling them to support your people efficiently.

Developed with industry-leading Microsoft technologies, Microsoft Dynamics GP provides the foundation and flexibility that help ensure smooth deployments, server-side updates, and efficient, cost-effective integrations and customizations. In line with our mission to deliver people-ready solutions, our security model is tailored to roles and tasks, enabling better auditing and reporting and simplifying administration.

Provide access to critical, timely information through integration with SQL Server technologies that include extensive management and development tools. Enhanced information retrieval and reporting through Microsoft SQL Server Reporting Services can help increase availability, performance, and ease of operation for business intelligence, data management, and developer productivity.

Open the flow of information across data sources and applications. Microsoft BizTalk® Server, Microsoft .NET, eConnect, and Web Services for Microsoft Dynamics GP enable businesses to integrate data from virtually any source, connecting people with the information they need to make decisions and drive growth. By deploying Microsoft Dynamics GP with Microsoft Office SharePoint Server 2007, you'll also gain advanced search, collaboration, workflow, and business intelligence capabilities.

Connect front-end customer relationship management with back-end financials.

Integration with Microsoft Dynamics CRM delivers a complete customer view and integrated sales, service, and accounting information—helping reduce data entry and streamline front- and back-office processes.

Combine Microsoft Dynamics GP with Microsoft Dynamics Retail Management System to manage store, financial, and inventory operations from a central location and gain deeper visibility into financial transactions at the individual store level.

Scale to meet changing needs with a solution built for growth. Powered by SQL Server 2005 and Windows Server™ 2003, Microsoft Dynamics GP has proven scalable in customer environments from a single desktop PC to more than 1,000 workstations.

Extend your solution reach with industry-standard tools. Without the need to touch Microsoft Dynamics GP code, you can personalize your solution to meet business or vertical industry requirements, add new features, integrate legacy applications, and modify windows, features, and process workflows.

INTEGRATED

The image features a dark blue background with a subtle, wavy, marbled texture. A solid white horizontal band runs across the middle of the image. The word "STREAMLINE" is written in a dark blue, sans-serif, all-caps font, centered within the white band.

STREAMLINE

“The end-to-end integration automates tasks that were once manual. Employees no longer have to re-enter information from online orders into the system each evening. That information is automatically captured. The new system has lessened labor and increased efficiency across the board.”

– Denny Dunn
Director of Operations
Laser Pros International

Fuels your business productivity

Do you want a solution that fits with the way your people actually work? Microsoft Dynamics GP delivers automation that adapts easily to meet your business and industry-specific needs, connecting information and processes so that employees, partners, and customers can work as a team to take your business forward.

Help build greater customer and supplier loyalty by streamlining and integrating financial management and business operations—including distribution, manufacturing, field service, and project management. Connect inventory control, purchasing, and sales order processing with your demand planning process to help reduce costs, improve cash flow, and ensure that you have the right stock at the right time to meet customer demand.

Drive efficiency and accuracy with flexible workflow processes—built on the Windows® Workflow Foundation in Office SharePoint Server 2007—that automate key business tasks, including notifications and approval routings for purchase orders, sales quotes, financial series batches, and sales credit limit overrides.

Extend the reach of business applications, information and processes to employees, customers, and partners through Windows SharePoint Services. Step up to Office SharePoint Server 2007 and gain search and collaborative networking capabilities that enable people to find and use Microsoft Dynamics GP information and business information stored in other systems.

Reduce paperwork and data re-entry and help management work more effectively by allowing employees to take a wide range of tasks online—from routine timesheets to complex purchase requisitions. Improve agility by enabling people to work from remote locations with portal-based access. Improve customer and partner satisfaction with extranets that provide secure, role-tailored information access.

Centralize budget management and create accurate, realistic budgets with Microsoft Forecaster. Simplify reporting compliance with Sarbanes-Oxley requirements by automating sign-offs in an auditable, traceable manner.

Specific industry requirements? No problem. Our authorized resellers and independent software vendors provide industry specific extensions to complement the unique requirements of worldwide industries—from complex manufacturers and wholesale distributors to state and local governments, not-for-profit organizations, the healthcare industry, and more.

“We have a clearer picture of our operations across the board because Microsoft Dynamics GP provides superior access to the data. It’s a huge benefit for us at corporate headquarters.”

– Clarence White
Chief Information Officer
Salvation Army

Enables confident decision making

Without information your people can’t make empowered decisions. Access to information from anywhere in Microsoft Dynamics GP includes list-based navigation, look-up windows, drill-back and inquiry tools, and custom links to applications and Web sites. Your total solution delivers business intelligence and insight that reaches everyone in your organization, whether they’re working in Microsoft Dynamics GP or other applications.

Provide access to real-time data that can easily be analyzed in familiar tools such as Office Excel. You can also take advantage of Microsoft reporting tools with more than 75 SQL Server Reporting Services reports.

Plan more effectively by monitoring all operations, revenues and spending, and sales trends with built-in drill-down, inquiry, and reporting capabilities. Proactively manage business conditions with real-time business alerts, SmartList inquiry capabilities, and a comprehensive view of manufacturing and distribution processes. When you deploy Microsoft Dynamics GP with Office SharePoint Server 2007, you’ll enable people to search and retrieve data throughout your systems—including Microsoft Dynamics GP data and documents in multiple formats and e-mail messages.

Take full advantage of Office Excel to find, use, and share information from across all areas of your business. From spreadsheet analyses to refreshable report templates, PivotTables® to Excel-based Analysis Cubes, people can use Office Excel to transform Microsoft Dynamics GP data into decision-driving information. For example, decision makers who want to perform ad hoc queries on Microsoft Dynamics GP data without logging into the system can work with

more than 200 Office Excel reports available out of the box. Reports can be stored for easy and remote access on Office SharePoint Server 2007 or the network or desktop location that works best for you.

Deliver the right information to the right people with the ability to generate, customize, and distribute reports in multiple formats. With Web-based, online analytical processing (OLAP), and graphical analysis options, you can build presentation-quality reports that put information into context for decision makers.

Enable viewing of reports and information from any location, any time, as well as use flexible scheduling and delivery options to publish reports. Microsoft Dynamics GP also offers personalized report navigation for the reporting options people use most often. Users can select every type of report from the Microsoft Dynamics GP Report List—including SQL Server Reporting Services and Office Excel reports—customize them as needed, and then store them for one-click access, whether they’re working in the system or in another application.

Software for Today and Tomorrow

Microsoft Dynamics GP delivers the flexible licensing and support options you need to help ensure that your solution can evolve with your business over the long term.

BUSINESS READY LICENSING

With Business Ready Licensing and the Business Ready Enhancement Plan, you can choose the solution you need now and add functionality when the time is right. Cost-effective, phased deployment and generous, out-of-the-box functionality at a lower entry price help maximize the value of your investment while enabling you to enhance productivity through support, training, best practices, and product updates.

By taking advantage of a flexible foundation and convenient licensing and support options, you can tailor your total solution to the size of your business, the way employees use data, and the information technology expertise available to you. This simplified approach and predictable path for growing your solution helps protect your investment and minimize disruption to your business when you upgrade your system—helping to ensure a low total cost of ownership.

MICROSOFT FINANCING

Whether you need software or a more comprehensive package that includes software, services, and hardware, Microsoft Financing helps make technology affordable. By financing your IT solutions and spreading payments in predictable installments, we can help you acquire the IT solutions you need now and free up your corporate credit lines for other investments.
